Prolifics®

QUICK FHIR

SHARE HEALTHCARE DATA THROUGH FHIR APIS

FHIR MASTERY
A four-step engagement helps you understand and fully utilize FHIR

CLOUD DEPLOYMENT
Host FHIR gateways and portals in the cloud with IBM Cloud Pak for Integration

LEADING TECHNOLOGY
Utilize leading FHIR tools and IBM technologies to support implementation

INTEGRATION EXPERTISE
Over 40 years of experience in integration makes Prolifics a perfect FHIR partner

Healthcare On FHIR

The FHIR standard represents a new way of connecting systems in the healthcare space. It forms the foundation for the future of open, intelligent, and data-based digital solutions to drive better patient care, increase provider impact on patient outcomes, and decrease healthcare costs in the age of value-based payments.

FHIR-accelerated interoperability enables the sharing of electronic medical records (EHR) and related information from sources across the healthcare ecosystem, whether stored internally or with partners.

FHIR Use Cases

► *Medical chart and related document sharing for insurance claims*
► *Universal access to a patient's Personal Health Record (PHR) for enhanced patient management*
► *Comprehensive patient care portals*
► *Advanced medical, clinical, and administrative analytics*
► *Clinical pathway and care plan optimization*
► *And much more!*

Are You Up to the FHIR Challenge?

FHIR implementation can be difficult. Most EHR vendors are supporting healthcare providers by FHIR-enabling patient systems.

However, without an application vendor, it is entirely up to your enterprise to navigate the joining of the FHIR ecosystem. While the standards are openly available, they require education, design, and development that can be costly and time-consuming.

Prolifics Quick FHIR

Prolifics Quick FHIR helps jumpstart your FHIR initiative. Our solution is built on leading IBM technology, and includes specially curated configurations and assets that help accelerate FHIR adoption. We guide you in rapid, comprehensive implementation across your enterprise.

Prolifics Quick FHIR supports leading FHIR efforts, including:

► *HL7 International's FHIR Accelerator projects*
► *CMS Blue Button API*
► *IBM Watson Health*
► *Hapi FHIR*

Insight, Execution, and Support

With Quick FHIR, you can:

- ▶ See **FHIR APIs in action** and learn more about what FHIR can do with a sample FHIR API sandbox.
- ▶ Understand how **IBM Cloud Pak for Integration on OpenShift** underpins FHIR adoption and support.
- ▶ Establish your own secure **FHIR API gateway and developer portal**, whether for prototyping or developing production solutions with our starter FHIR APIs.
- ▶ Host your gateway and portal **on-premise or in the cloud** with leading vendors like IBM, AWS, Microsoft Azure, or Google Cloud.
- ▶ **Save time and costs** by leveraging Prolifics' pre-built components.

The Quick FHIR Process

Start your Quick FHIR journey with a no-cost workshop that helps you understand pain points, business drivers, and areas for improvement within your enterprise.

Then, our architecture and advisory services validate your business requirements, identify potential use cases, assess your systems and applications, and develop a business value assessment that demonstrates how FHIR can benefit your business.

Our experts then build quick start pilots, deploying a few simple applications as a proof of concept. Finally, we operationalize those pilots, scaling them up to implement FHIR across your enterprise.

Prolifics: Partners in FHIR

With over 40 years of experience as integration partners and countless success stories in the healthcare industry, Prolifics has the expertise and vision to help your organization chart a future with FHIR.

Contact us at **solutions@prolifics.com** to learn more about our Quick FHIR solution.
